

What is Phone Finder:

This **All In One** brilliant Bluetooth device allows you to find your phone in just one click. Once clicked, your phone will ring, vibrate and flash so that you can find it. If your phone is out of range (more than 50 feet / 15 meter away), visit our website to locate your phone on the map.

We have managed to form an **All In One Platform** like no other competitive device in the market, a device that answers all of the end user's needs.

End users will not need to adapt their phone and operating system to the new device and consequently will not need to look for different devices of different functionality.

In addition to all that, this wonderful user-friendly device has a very clear added value in both functionality and compatibility as follows:

- ✓ It is the only device of its kind that works with any smartphone and operating system and with any OS version.
- ✓ It has all the required functionality in order to successfully locate your phone and remotely keep your personal data safe and out of reach.
- ✓ It has the lowest power consumption, it hardly consumes any energy from both its own battery and your phone's battery.

(See the comparison table next page)

We are basically seeking a large scale wholesaler/distributor/retailer that will become our sole representative in his country so all of our potential customers (medium and small scale retailers) could be directed towards him .

Zomm Wireless Leash	Anti-Lost Alarm	V	V	runs out every 3 days	X	V	X	X	2.1	49

In addition:

If you've lost your phone, or whether it was stolen, you can use Phone Finder on the web or the Device Manager app on you PC to remotely ring, lock, or erase the data that is stored on your phone.

Important:

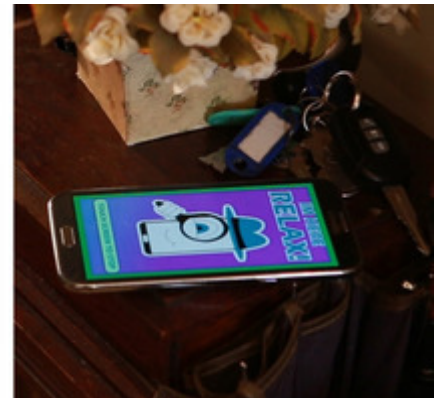

Erasing your phone basically performs a Factory Reset. Your apps, photos, music and settings will be deleted. After you've erased your phone's data, Phone Finder will no longer work. Please note that this reset is permanent although Phone Finder may not be able to wipe the content of the SD card installed on your phone.

- ✓ Phone Finder is FCC and CE compatible.
- ✓ Phone Finder has a US patent pending for a unique power switching mechanism.

What makes Phone Finder unique?

- ✓ It locates your device with just one click, even on silent mode.
- ✓ The only phone finding solution which works on EVERY Smartphone.
- ✓ 3 Years of battery life (about 5,000 uses).
- ✓ 65 feet, seeking range (hearing distance).
- ✓ Plug & Play – Application Setup in just 30 seconds.
- ✓ A simple **one-click solution**, the only thing you need to worry about is ONE push of a button (it works even if your phone is on silent mode).

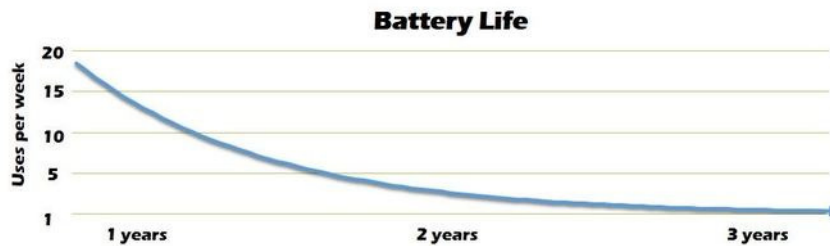

It works with EVERY Smartphone - Phone Finder is a **Bluetooth v3.0** based hardware, designed specifically to locate your phone. **Bluetooth v3.0** is the only Bluetooth version to have both forward and backward compatibility, which allows Phone Finder to work on every Smartphone. It is not limited to an IOS or Android version. In comparison, Bluetooth v4.0 based products only support a very limited number of smartphone models.

It works three years on a single Battery due to a cutting edge technology which enables Phone Finder to consume energy only when activated. This translates to minimum battery consumption on both your Smartphone and Phone Finder. If Phone Finder is used approximately 5 times a week the battery should last up to 3 years.

Any Time Any Where - Phone Finder will locate your phone from up to 65 feet (20m) away. In fact, that is the distance most people are able to hear their phone. Overriding silent mode and vibrate mode, Phone Finder will make your phone reveal itself no matter what.

In case your phone is out of range, don't be alarmed! You can always log on to our website and locate your phone on the map.

Easy Setups - Setting up Phone Finder is as easy as 1-2-3
