

In recent times we are witnessing drastic changes affecting the global climate. These changes have resulted in more common occurrences of natural disasters and severe environmental damage. One of the most fundamental resources impacted by these disasters is the supply of water on top of the threat to water sources contamination caused by failure to infrastructure and the adverse effects to water supplies. Supplying usable drinking water in pipelines is critical for governments, municipalities, cities, and other authorities. However, during an emergency or natural disaster, access to potable water sources may be limited, jeopardizing the lives of residents and citizens. Considering the importance of water in our everyday lives and the challenges the industry is facing, we take the pleasure of inviting you to join an event dealing with water crises, where we will discuss the dangers and implications of such events.

Water Emergence @ IL 2021 will be held on December 8th and 9th by the Israel Export Institute and The Foreign Trade Administration at the Israeli Ministry of Economy and Industry. It is our pleasure to invite you to join us as our guest.
