CyberArk

CyberArk is the global leader in Identity Security. Centered on privileged access management, CyberArk provides the most comprehensive security offering for any identity — human or machine — across business applications, distributed workforces, hybrid cloud workloads and throughout the DevOps lifecycle. The world's leading organizations trust CyberArk to help secure their most critical assets.

Noname Security

Noname Security is the only company which takes a complete, proactive approach to API Security. The company works with 20% of the Fortune 500 and covers the entire API security scope across three pillars: posture management, runtime security, and API security testing. Noname Security is backed by leading venture capital firms, including Lightspeed, Georgian, The Syndicate Group (TSG), Forgepoint, Next47, Insight Partners, and Cyberstarts, and has raised \$220M, achieving unicorn status only one year out of stealth. Noname Security is privately held, remote-first with headquarters in Silicon Valley, and offices in Tel Aviv and Amsterdam.

Snyk

Snyk is a developer-first security company, that helps software-driven businesses develop quickly and build secure applications. Only Snyk provides a platform to secure all of the critical components of today's application development. With tight integration into existing developer workflows, source control (including Bitbucket, GitLab, Github), and CI/CD pipelines, Snyk enables efficient security workflows and reduces mean-time-to-fix. Snyk secures industry leaders such as Google, Salesforce, and BBC.

Cisco

Cisco Systems, Inc. is the worldwide leader in networking for the Internet. Today, networks are an essential part of business, education, government, and home communications. Cisco hardware, software, and service offerings are used to create the Internet solutions that make these networks possible, giving individuals, companies, and countries easy access to information anywhere, at any time. In addition, Cisco has pioneered the use of the Internet in its own business practice and offers consulting services based on its experience to help other organizations around the world.

IBM

In an industry focused on building walls, IBM Security is focused on creating an open, connected security ecosystem that leverages AI, cloud, orchestration and collaboration to help clients improve compliance, stop threats and grow their businesses securely. Our strategy reflects our belief that today's defenses will not suffice tomorrow. It challenges us to approach our work, support our clients and lead the industry, allowing you to be fearless in the face of cyber uncertainty.

Akamai

Akamai powers and protects life online. Leading companies worldwide choose Akamai to build, deliver, and secure their digital experiences — helping billions of people live, work, and play every day. With the world's most distributed compute platform, from cloud to edge, we make it easy for customers to develop and run applications, while we keep experiences closer to users and threats farther away.

Pentera

Pentera is the category leader for Automated Security Validation, allowing every organization to test with ease the integrity of all cybersecurity layers including their ransomware readiness, unfolding true, current security exposures at any moment, at any scale. Thousands of security professionals and service providers around the world use Pentera to guide remediation and close security gaps before they are exploited. In 2020, Pentera was chosen by Gartner as a Cool Vendor in the Security Operations and Threat Intelligence report.

Israel Aerospace Industries

A leader in defense, aerospace, and commercial markets, IAI leverages state-of-the-art technology and decades of combat-proven experience delivering solutions to your national defense and security challenges. Delivering large turnkey projects, IAI acts as a prime contractor, subcontractor, and team members in dozens of large programs for the aerospace, land, sea, and cyber domains and multi-domain applications. IAI is a fully government owned company.

Check Point

Check Point Software Technologies Ltd. is a leading provider of cyber security solutions to governments and corporate enterprises globally. Its solutions protect customers from 5th generation cyber-attacks with an industry leading catch rate of malware, ransomware and other types of attacks. Check Point offers multilevel security architecture, "Infinity" Total Protection with Gen V advanced threat prevention, which defends enterprises' cloud, network and mobile device held information. Check Point provides the most comprehensive and intuitive one point of control security management system, protecting over 100,000 organizations of all sizes.

Tenable

Tenable® is the Exposure Management company. Approximately 40,000 organizations around the globe rely on Tenable to understand and reduce cyber risk. As the creator of Nessus®, Tenable extended its expertise in vulnerabilities to deliver the world's first platform to see and secure any digital asset on any computing platform. The company's platform offers unified visibility of the attack's surface, continuous data analysis, and vulnerability prediction. Its intuitive dashboard provides immediate insight. Tenable customers include approximately 60 percent of the Fortune 500, approximately 40 percent of the Global 2000, and large government agencies.

CrowdStrike

CrowdStrike has redefined security with the world's most advanced cloud-native platform that protects and enables the people, processes and technologies that drive modern enterprise. We secure the most critical areas of enterprise risk – endpoints and cloud workloads, identity, and data – to keep customers ahead of today's adversaries and stop breaches. Powered by the CrowdStrike Security Cloud, the CrowdStrike Falcon® platform leverages real-time indicators of attack, threat intelligence on evolving adversary tradecraft and enriched telemetry from across the enterprise to deliver hyper-accurate detections, automated protection and remediation, elite threat hunting and prioritized observability of vulnerabilities – all through a single, lightweight agent. With CrowdStrike, customers benefit from superior protection, better performance, reduced complexity and immediate time-to-value.

Deloitte

cyber centers, with over 70 cyber experts with diverse capabilities (technology, regulation, cloud, strategy, risk management, etc.). These capabilities allow us to tailor the right solution and team to our clients' needs. Deloitte's cyber experts connect proven methodologies based on generally accepted standards with practical knowledge and broad experience in the various industry sectors, in order to help clients understand cyber risks relevant to their business, required architecture and technological solutions, and regulatory requirements. One of our leading pillars is all stages of cloud journey: our cloud experts and cyber specialists can guide any organization through it, from strategy through migration to optimization.

Mastercard

Mastercard is a technology company in the global payments industry that connects consumers, financial institutions, merchants, governments, digital partners, businesses and other organizations worldwide, enabling them to use electronic forms of payment instead of cash and checks. We make payments easier and more efficient by providing a wide range of solutions and services using our family of well-known and trusted brands, including Mastercard®, Maestro® and Cirrus®. We operate a multi-rail payments network that provides choice and flexibility, offer integrated payment products and services, and capture new payment flows. Our value-added services include cyber and intelligence solutions, to allow all parties to transact easily and with confidence, as well as other services that provide proprietary insights, drawing on our principled use of consumer and merchant data. Our franchise model sets the standards and ground-rules that balance value and risk across all stakeholders and allows for interoperability among them. Our payment solutions are designed to ensure safety and security for the global payments ecosystem.

FinSec Innovation Lab

The FinSec Innovation Lab is a joint venture by Mastercard and Enel X, operating under a franchise of the Israel Innovation Authority, the Israel Ministry of Finance, and the Israel National Cyber Directorate. The lab assists early-stage startups in the fields of cybersecurity and fintech to perform POCs and accelerate the commercialization of their products. The lab provides its portfolio companies business support, such as access to funding from the Innovation Authority; technological support, such as an exclusive infrastructure; and design partnership, such as connections to leading experts from Mastercard and Enel X and our versatile global network of partners. The portfolio companies enjoy a unique environment, which brings their solutions one step forward and real value creation.

Netskope

Netskope is a global cybersecurity leader which is redefining cloud, data, and network security to help organizations apply zero trust principles to protect data. Fast and easy to use, the Netskope platform provides optimized access and zero trust security for people, devices, and data anywhere they go. Netskope helps customers reduce risk, accelerate performance, and get unrivaled visibility into any cloud, web, and private application activity. Thousands of customers, including over 25 of the Fortune 100, trust Netskope and its powerful NewEdge network to address evolving threats, new risks, technology shifts, organizational and network changes, and new regulatory requirements. Netskope helps customers be ready for anything on their SASE journey.

NTT Innovation Laboratory Israel

NTT Innovation Laboratory Israel (NTT-IL) is a first-of-its-kind hub in Israel for NTT, a global leader in technology and business solutions. With \$112B in revenue and 320,000+ employees in over 80 countries and regions, NTT leads the Japanese communication market and is a Fortune 100 company. Established as an NTT subsidiary in July 2021, NTT Israel aims to build and strengthen the corporation's relationship with the Israeli innovation ecosystem. We collaborate with Israeli companies and academia developing cutting-edge technologies in various fields, which will support NTT and its customers in facing current challenges. NTT Israel also explores the integration of Israeli technologies in services and products that are developed by the company, which could be distributed to NTT's customers worldwide, and searches for investment opportunities with Israeli companies.

Intuit

Intuit is the global financial technology platform that powers prosperity for the people and communities we serve. With more than 100 million customers worldwide using TurboTax, Credit Karma, QuickBooks, and Mailchimp, we believe that everyone should have the opportunity to prosper. We never stop working to find new, innovative ways to make that possible. We provide you with a personalized experience to help you get your maximum refund, and help you simplify your finances and save money with data-driven insights and tools.

YL Ventures

YL Ventures funds and supports brilliant Israeli tech entrepreneurs from seed to lead. Based in Silicon Valley and Tel Aviv, YL Ventures manages over \$800M and specializes in cybersecurity. YL Ventures accelerates the evolution of portfolio companies via strategic advice and US-based operational execution, leveraging a powerful network of CISOs and global industry leaders. The firm's track record includes investment in Israeli cybersecurity unicorns Axonius and Orca Security, as well as successful, high-profile acquisitions by major corporations including Palo Alto Networks, Microsoft, CA and Proofpoint.

Delinea

Delinea is a leading provider of privileged access management (PAM) solutions that make security seamless for the modern, hybrid enterprise. Our solutions empower organizations to secure critical data, devices, code, and cloud infrastructure to help reduce risk, ensure compliance, and simplify security. Delinea removes complexity and defines the boundaries of access for thousands of customers worldwide. Our customers range from small businesses to the world's largest financial institutions, intelligence agencies, and critical infrastructure companies.

Fastly

Fastly's edge cloud platform helps the world's top brands deliver the fastest online experiences possible, while improving site performance, enhancing security, and empowering innovation. With world-class support that achieves 95%+ average annual customer satisfaction ratings, Fastly's suite of edge compute, delivery, and security offerings has been recognized as a leader by industry analysts such as IDC, Forrester and Gartner. Compared to legacy providers, Fastly's network architecture is the fastest on the planet, empowering developers to deliver secure websites and apps at global scale with rapid time-to-market and industry-leading cost savings. Thousands of prominent organizations rely on Fastly, including Reddit, Pinterest, Neiman Marcus, The New York Times, and GitHub.

HUB Security

HUB Security was established in 2017 by veterans of the 8200 and 81 elite intelligence units of the Israeli Defense Forces. The company specializes in unique cyber security solutions which protect sensitive commercial and government information. The company debuted an advanced encrypted computing solution aimed at preventing hostile intrusions at the hardware level, while introducing a novel set of data theft prevention solutions. HUB operates in over 30 countries and provides innovative cybersecurity computing appliances as well as a wide range of cybersecurity professional services worldwide.

Cobwebs Technologies

Cobwebs Technologies is a worldwide leader in web intelligence. Our innovative solutions are tailored to the operational needs of national security agencies and the private sector, identifying threats with just one click. Cobwebs' solutions were designed by our intelligence and security experts as vital tools for the collection and analysis of data from all web layers: open, deep, and darkweb. Our web intelligence platform monitors these vast sources of data to reveal hidden leads and generate insights. Our exclusive technology extracts targeted intelligence from big data using the latest machine learning algorithms, automatically generating intelligent insights.

Orca Security

Orca Security provides instant-on security and compliance for AWS, Azure, and GCP — without the gaps in coverage, alert fatigue, and operational costs of agents or sidecars. Simplify cloud security operations with a single CNAPP platform for workload and data protection, cloud security posture management, vulnerability management, and compliance. Orca Security prioritizes risk based on the severity of the security issue, its accessibility, and business impact. This helps you focus on the critical alerts that matter most. Orca Security is trusted by global innovators, including Databricks and Autodesk.

Imperva

Imperva is the comprehensive digital security leader, on a mission to help organizations protect their data and all paths to it. Only Imperva protects all digital experiences, from business logic to APIs, microservices, and the data layer — and from vulnerable, legacy environments to cloud-first organizations. Customers around the world trust Imperva to protect their applications, data, and websites from cyberattacks. With an integrated approach combining edge, application security, and data security, Imperva protects companies ranging from cloud-native start-ups to global multi-nationals with hybrid infrastructure. Imperva Threat Research and our global intelligence community keep Imperva ahead of the threat landscape and seamlessly integrate the latest security, privacy, and compliance expertise into our solutions.

Elron Ventures

Elron Ventures is a leading early-stage investor, committed to helping promising companies with big ideas become market leaders. Elron Ventures provides direct capital and assistance to companies during the development of their products and teams. It focuses mainly on cybersecurity and enterprise software ventures. Elron Ventures provides its founders with a range of operational and management support, helping them tighten their connections to the global market and maximize the benefits of Elron Ventures' network and expertise.

BAYER

Bayer is a global enterprise with core competencies in the Life Science fields of health care and agriculture.

Dhub

CyberStar

Wing Security

Wing Security is an Israeli SaaS security company, which helps businesses identify and fix potential SaaS-related security vulnerabilities through combining non-intrusive discovery methods and automation. The company has the tools and expertise to keep your organization safe and secure, automatically. Wing Security was founded in 2020 by Noam Shaar (retired brigadier general, IDF CISO) and Galit Lubetzky Sharon (retired IDF colonel), both of whom are cyber security leaders with decades of experience within unit 8200 and the IDF Cyber Defense Division.

NightDragon Management Company, LLC

NightDragon is an investment and advisory firm focused on growth and late-stage investments within the cybersecurity, safety, security and privacy industries. Its platform and vast industry network provide unparalleled threat insights, deal flow, market leverage and operating expertise to drive portfolio company growth and increase shareholder value. Founded by Dave DeWalt, the NightDragon team has more than 25 years of operational and market expertise leading technology companies such as Documentum, EMC, Siebel Systems (Oracle), McAfee, Mandiant, Avast and FireEye.

Team8

Team8 is a venture group and leading think tank solving problems of magnitude by creating and accelerating category-leading companies. Its unique company-building model is powered by a dedicated team of company-builders that lead the process from surfacing the problem through to building the solution in collaboration with a strong network of enterprise leaders. Team8 takes on the biggest problems at the heart of security, privacy, data, AI/ML, and builds companies to solve them. Team8 is backed by some of the world's most renowned businesses including Cisco, Microsoft, AT&T, Walmart, Airbus, Softbank, Accenture, Qualcomm, Moody's, Munich-Re, Dimension Data, Nokia and Scotiabank.

Gav-Yam Negev

The Gav-Yam Negev advanced technologies park, Israel's most advanced center of research and development, began its activity in recent years, adjacent to the Ben Gurion University campus and the IDF C4i Branch campus, in Be'er Sheva, with the objective of creating a new international arena for opportunities for scientific innovation and advanced technological developments in various fields, including advanced cyber technologies, machine learning, data science, AI, robotics, innovative compound materials, media, IoT, and various additional fields of research studied in Ben Gurion University's advanced research centers.

Fox Rothschild LLP

Fox Rothschild's Israel Practice Group provides innovative legal services that help growing Israeli companies seize business opportunities and reach their goals. The group is one of the largest U.S. law firms, with over 30 offices located in major business hubs throughout the country. We serve Israeli businesses and individuals in key areas of practice, such as emerging companies & venture capital, immigration, intellectual property, privacy & data security, labor & employment, and litigation. Fox Rothschild is particularly well-known for advising Israeli tech firms and other industry disruptors on critical decisions involving corporate structure, intellectual property, import/export, data privacy, and employment issues.

KELA GROUP

DarkOwl

We illuminate the Darknet. DarkOwl is the industry's leading provider of Darknet data. We offer the world's largest commercially available database of information continuously collected from the Darknet, allowing our customers the ability to turn this data into a powerful tool to identify risk at scale and drive better decision making. Our platform tools allow users to parse and analyze the data for specific use cases, and our database is updated from tens of thousands of sites across multiple Darknets every day.

Synopsys

Synopsys builds trust in software by enabling organizations manage application security, quality, and compliance risks at the speed their business demands. Our market-leading solutions help developers to secure code as fast as they write it; development and DevSecOps teams to automate testing within development pipelines without compromising velocity; and security teams to proactively manage risk and focus remediation efforts on what matters most. With Synopsys, organizations can transform the way they build and deliver software, aligning people, processes, and technology to intelligently address software risks across their portfolio and at all stages of the application lifecycle.

XM Cyber

XM Cyber

XM Cyber is a leading hybrid cloud security company that is changing the way innovative organizations approach cyber risk. By continuously uncovering hidden attack paths to businesses' critical assets and security controls gaps across cloud and on-prem environments, it enables security teams to remediate exposures at key junctures and eradicate risk with a fraction of the effort. Many of the world's largest, most complex organizations choose XM Cyber to help eradicate risk. Founded by top executives from the Israeli cyber intelligence community, XM Cyber has offices in North America, Europe, and Israel.

CybergumIEC

CybergymIEC – the only critical infrastructure-native cyber defense company – offers a comprehensive suite of cutting-edge training solutions, defense products and value-added services, based on knowhow and technology proven effective in defending and securing the infrastructure of one of the most-targeted companies – the Israel Electric Corporation (IEC).

NSO Group

NSO Group is a lantern that provides intelligence and law enforcement agencies the capability to push back against encroaching darkness, seeing clearly what is otherwise invisible. Developed by elite technology and data-science experts, our cyber intelligence and homeland security solutions provide a wide spectrum of responses to the threats and play a critical role in protecting the right to life, security and personal safety. Our clients are solely vetted governments entities – the men and women lawfully entrusted with public safety. With your safety.

Radiflow

Radiflow

Radiflow is an OT ICS cyber security company that offers products and services to detect, monitor, and mitigate cyber risk in ICS environments. The company offers cyber-OT risk assessments, automated cyber threat detection platforms, and continuous MSSP services. Radiflow's solutions are installed in over 6000 sites around the globe, with its comprehensive portfolio catering to challenges facing SOC teams and management in detection, response, and compliance. Incorporating cyberthreat intelligence, Radiflow's solutions offer continuous threat and risk monitoring. In addition, the solution offers cyber insights, risk mitigation, and top security control prioritization. Radiflow solutions are utilized extensively by ICS MSSP and system integrators to manage OT ICS cyber risk.

Cyberbit

Cyberbit provides the world's leading SaaS platform for cyber security skill development and readiness. The platform dramatically improves information security team performance, optimizes hiring processes, and accelerates the onboarding process for new hires by delivering a hyper-realistic simulation of real-world threats, within a virtual SOC. The Cyberbit platform combines an advanced cyber range for live-fire team exercises, a cyber lab catalog for hands-on, individual skill development, and a cyber crisis simulator for executive teams, which replaces the conventional tabletop exercises. All exercises are aligned with the MITRE ATT&CK and NICE Cyber Security Frameworks, and provide CPE credits on (ISC)2. Our platform serves over 500,000 exercises every year and is used by the world's largest financial institutions, health care providers, global system integrators, government and military organizations, and higher education institutions. It is also the official provider of cyber ranges for the FS-ISAC organization.

Merlin Ventures

Merlin Ventures is the investment arm of Merlin Cyber, a company with over 20 years of success in bringing technologies to market. What makes us unique is our business model, as strategic investors focused on driving growth and value for cybersecurity software companies with market-leading potential. We search globally for opportunities to partner with world-class entrepreneurs with cutting-edge technology. Every investment in our portfolio benefits from our expertise within the U.S. federal and commercial markets and enjoys critical engineering, go-to-market, sales, and support services from Merlin's vastly experienced team. Merlin invests in early-stage companies (seed/A round) focused on cybersecurity, and has been investing in Israeli companies since 2019, including Talon Cyber Security, Dig Security, Enso, Oxeye, Sepio, and more. Founded by David Phelps in 1999, Merlin is headquartered in Washington, DC., with an office in Tel Aviv. Shay Michel leads the Merlin team in Israel, and the US office is led by Seth Spergel.

Waterfall Security Solutions

Waterfall Security Solutions' unbreachable OT cybersecurity technologies keep the world running. For more than 15 years, the most important industries and infrastructure have trusted Waterfall to guarantee safe, secure and reliable operations. The company's growing list of global customers includes national infrastructure ministries, powerplants, nuclear generator operators, onshore/offshore oil and gas facilities, refineries, manufacturing plants, utility companies, and more. Waterfall's patented Unidirectional Gateways and other solutions combine the benefits of impenetrable hardware with unlimited software-based connectivity, enabling 100% safe visibility into industrial operations and automation systems.

The Luzzatto Group

The leading IP group in Israel, celebrating 154 years of practice. The Group's unwavering dedication to clients has carried it into its second century and fifth generation. The Group includes the patent law firm Luzzatto and Luzzatto and the Luzzatto Law Firm, which specializes in IP and commercial law, along with other companies. Entrepreneurs, inventors, startups, scientists, artists, and developers seek out the Group's services to enjoy a personalized approach with a global outlook that helps clients protect their intellectual property and commercialize research, inventions, and products. The Group's philosophy is one of uncompromising professional excellence, personal service, and constant innovation. The Luzzatto Group's teams specialize in all fields of technology, including high-tech, heavy industry, life sciences and medicine, electronics and software, telecommunications, IT, environment, agrotech, foodtech, energy, and cyber.

SafeBreach

Combining the mindset of a CISO and the toolset of a Hacker, SafeBreach is the pioneer in breach and attack simulation (BAS) and is the most widely used continuous security control validation platform. SafeBreach continuously executes attacks, correlates results to help visualize security gaps, and leverages contextual insights to highlight remediation efforts. With its Hacker's Playbook™, the industry's most extensive collection of attack data enabled by real threat intelligence research, SafeBreach empowers organizations to get proactive about security with a simple approach that replaces hope with data.

Finnegan

Finnegan is one of the world's largest IP law firms and a go-to source for Israeli companies. We represent over 200 of Israel's leading and most sophisticated enterprises, helping navigate IP disputes and patent infringement litigation, counseling on how to strategically protect technology to maximize value, managing patent portfolios, and developing revenue streams through creative patenting and licensing. In the words of Chambers USA, "Finnegan's work is nothing short of exceptional."

CyberIL

CyberIL provides leading and comprehensive technology solutions to the growing needs of companies and organizations that strive to improve the level of information security, manage cyber threats, respond and recover from cyber-attacks and minimize damages that may result in cease of operations and even significant financial losses. We offer a variety of advanced technologies, extensive professional knowledge in cyber protection, communication networks, and IT/OT/IoT infrastructures. Our professional, meticulous response is based on many years of experience in managing complex projects for the public, security, government, and civil sectors. CyberIL is the leading integrator in Israel of the global company FORESCOUT for IT/OT/IoT protection solutions and is the sole GOLD partner in Israel. The company has a full commitment to the customer and their needs, respects their resources, and works to bring real and substantial added value to its customers.

Cyberint

Cyberint is a cybersecurity solution provider that pioneered attack surface reconnaissance. The solution fuses threat intelligence with attack surface management, providing organizations with extensive integrated visibility into their external risk exposure. Leveraging autonomous discovery of all external-facing assets, coupled with open, deep & dark web intelligence, it allows cybersecurity teams to uncover their most relevant known and unknown digital risks – earlier. Global customers, including Fortune 500 leaders across all major market verticals, rely on Cyberint to prevent, detect, investigate, and remediate phishing, fraud, ransomware, brand abuse, data leaks, external vulnerabilities and more, ensuring continuous external protection from cyber threats.

Chainalysis

Chainalysis is the blockchain data platform. We provide data, software, services, and research to government agencies, exchanges, financial institutions, and insurance and cybersecurity companies in over 70 countries. Our data powers investigation, compliance, and market intelligence software that has been used to solve some of the world's most high-profile criminal cases and grow consumer access to cryptocurrency safely. Backed by Accel, Addition, Benchmark, Coatue, GIC, Paradigm, Ribbit, and other leading firms in venture capital, Chainalysis builds trust in blockchains to promote more financial freedom with less risk.

Sasa Software

Sasa Software is a cybersecurity developer specializing in solutions for the protection of networks from email and file-based attacks. Through application of Content Disarm & Reconstruction (CDR) technology, Sasa's GateScanner suite delivers extreme content sanitization to a wide range of network configurations and use cases – preventing both known, as well as previously unseen (signatureless/ zero-hour) file-embedded malware. GateScanner adds a critical layer of protection to highly-sensitive networks and is currently deployed in top-tier government networks in Israel and Singapore, as well as by hundreds of organizations in infrastructure, financial services, energy, transportation, security, legal services and healthcare sectors, worldwide.

Cypago

Established in early 2020 by seasoned cybersecurity and compliance experts, Cypago aims to transform how organizations adopt and implement security standards. With its open compliance platform, Cypago turns compliance management into an automated, cost-effective process. The Cypago solution leverages advanced cloud, security, and AI technologies to support any security standard in both cloud and on-premise environments.

Reflectiz

Reflectiz is a cybersecurity company specializing in next-generation web threats. Years of research by infosec experts led to the creation of its cutting-edge platform, which global companies are now using to keep their websites safe. Reflectiz, which has been recognized by Gartner for innovation in website security, is ready to face today's web threats head-on, making the internet a safer place for both businesses and customers.

CYREBRO

CYREBRO pioneered the first online, interactive Security Operations Center (SOC) platform to bring state-level cybersecurity to businesses of all sizes, ensuring fast and efficient responses to cyber threats. Customers benefit from a first-of-its-kind, complete managed SOC solution with advanced 24/7/365 capabilities, including threat intelligence and hunting, forensic investigation, and incident response. Headquartered in Israel, CYREBRO's leadership combines decades of deep cybersecurity expertise together with monitoring, investigations and state-level incident response capabilities.

Bright Security LTD

Bright Security is a developer-centric Dynamic Application Security Testing Solution, also known as a DAST. Founded in 2018, Bright's mission is to enable organizations to ship secure applications and APIs at the speed of business. We do this by enabling quick & iterative scans to identify true and critical security vulnerabilities without compromising on quality, or software delivery speeds. Bright empowers AppSec teams to provide the governance for securing APIs and web apps while enabling developers to take ownership of the actual security testing and remediation work early in the SDLC.

Terafence IoT Cybersecurity

Based in Israel, Terafence has developed a proprietary cybersecurity solution with an advanced microchip and firmware which isolates IoT and IIoT devices, while maintaining uninterrupted data flow and control. This type of solution for protecting IoT devices has become crucial, as increased cyber threats are being launched through poorly protected IoT assets. The data transmitted from a company machine to the cloud must be sent securely and without latency or loss of information. Terafence's Smart Air-Gap Data Flow Controller HW-based solution for cyber-secure connectivity ensures total protection from tampering, enabling data outflow while completely blocking entry. The company currently focuses on smart factories (Industry 4.0), IP camera protection, utilities, and critical infrastructures.

Minerva Labs

Minerva is the industry's first solution dedicated to mitigating the risks associated with Ransomware, co-existing with EDR/EPP/XDR solutions without causing any endpoint degradation. In 2021, over 7000 ransomware attacks have taken place daily, costing the industry over \$20 Billion. 80% of 2021's ransomware victims had up-to-date EDRs installed! Existing EDRs are not enough: they are built to detect malicious activity, and only then respond. Minerva Armor is built to defeat ransomware attacks before it can do any damage, through proprietary anti-evasion techniques which turn ransomware's security bypass mechanisms against themselves. Our solution prevents both known and unknown attacks, without even needing to detect them, and reduces EDR alerts you need to respond to by up to 80%.

Silverfort

Silverfort pioneers the first Unified Identity Protection platform, that enables enterprises to extend MFA and modern identity security controls to any sensitive resource, including ones that couldn't be protected before – legacy applications, service accounts (non-human identities), IT/OT infrastructure, command-line interfaces used by ransomware, and many more. Silverfort enables enterprises to prevent, detect and respond to identity threats such as account takeover and lateral movement, achieve compliance with industry regulations and cyber insurance requirements, and consolidate their legacy and cloud-based IAM 'silos' to gain unified security and user experience everywhere. Silverfort is trusted by hundreds of enterprise customers around the world, including Fortune 100 companies.

Cervello

Cervello accelerates rail digital transformation by securing the industry's infrastructure and operations from cyber threats. Cervello gives you the confidence to see, secure, and manage all assets connected to your critical network, combining OT, IoT, IT and physical systems, and turn the associated data into a powerful resource. This means the end of any compromise between security, safety and usability. Put simply, this allows you to operate with confidence. The world's leading rail operators and infrastructure managers trust Cervello to minimize threats and prevent cybersecurity incidents, thereby increasing their safety, reliability, business continuity and service availability.

DEMarketplace

Safe Security

Safe Security's cyber risk quantification and management platform – SAFE, provides security leaders with real-time risk score, the potential financial impact of cyber events, and prioritized recommendations. Using data-science algorithms co-developed with MIT, SAFE empowers leaders to make data-driven decisions, justify cybersecurity ROI, and discuss cyber risk with their board. Safe Security has been a leader in cybersecurity and digital business risk quantification for over a decade.

Hudson Rock

Hudson Rock is a cybercrime intelligence company that specializes in acquiring compromised credentials from threat actors, which we then put to use across our two products: Cavalier and Bayonet. Cavalier is a brand-protection monitoring and notification product for threat intelligence professionals that notifies security teams about compromised credentials of employees, partners and users. Cavalier's API-based cybercrime intelligence feed is also used for data enrichment for cybersecurity products and risk modeling. Our second product, Bayonet, is a first-of-its-kind sales prospecting and enrichment tool for sales professionals selling cybersecurity products & services. It is ideal for MSPs, MSSPs and IT vendors.

Elastic

Elastic is the leading platform for search-powered solutions. We help everyone find what they're looking for to accelerate the results that matter. With solutions in enterprise search, observability, and security, we help enhance customer and employee search experiences, keep mission-critical applications running smoothly, and protect against cyber threats.

e-MSI Sp.z.o.o.

e-MSI is a leading supplier of process digitization services using the powerful and flexible low-code digitalization platform JobRouter®. Founded in 2011 in Poland, we specialize in helping businesses create and keep a competitive advantage in their respective industries. From 2020 we have been responsible for building the JobRouter partners network in Poland, Norway, Denmark, Finland, Sweden, Lithuania, Latvia, Estonia, Israel, and the UAE. JobRouter® It helps companies digitalize and automate any business process. Users benefit from excellent process automation, agile document management and efficient data management. In addition, we specialize in automated content interpretation. Our product – the IDR® (Intelligent Data Recognition) helps analyze and retract data from various sources like documents of any type, emails, and images.

ALLSTARSIT

ALLSTARSIT is a leading international Software R&D, technical support, and talent acquisition service provider. With 20 years of experience in finding the best talent on the market and setting up R&D centers around the world for high-tech companies, ALLSTARSIT operates development hubs across the entire CEE Region (Poland, Ukraine, Romania, Bulgaria, Portugal, Macedonia), Israel, India, Emirates, Philippines, and LATAM. The company helps businesses expand their tech teams internationally, using hiring timelines that support a cost-effective, quick-to-market strategy, while finding good matches for our global network of remote software talent and providing them with the necessary resources to thrive within the company.

OX Security

OX Security is the first and only end-to-end software supply chain security solution that empowers DevSecOps teams with visibility, security and integrity from modeling and planning through to production. Because we scan the complete software supply chain and not just the CI/CD, the visibility is complete, contextual prioritization of issues is accurate and automated remediation recommendations are more trustworthy.

Dig Security

Dig is an agentless multi-cloud data security platform that discovers, classifies, and protects sensitive data. Using Dig's data security posture management (DSPM) capabilities, you can quickly locate your most critical data and organizational "crown jewels" in both structured and unstructured data assets. In addition – and most importantly – Dig provides real time data detection and response (DDR) to ensure an immediate handling of newly discovered data-related incidents by integrating with your existing security solutions.

Zero Networks

Zero Networks protects organizations of all sizes by providing a simple, single platform for secure remote connectivity and software-defined segmentation for any asset: IT/OT, on-prem or in the cloud. Zero Networks Connect™ connects employees and vendors to your network with Zero Trust architecture that uses the best of VPN and ZTNA – without their flaws. Zero Networks Segment™ stops lateral movement and kill ransomware by automatically placing a firewall on every asset—in a click and without any agents.

CYBER 2.0

We provide complete defense against the spread of all cyber-attacks, including new and unknown ones, within and outside the organizational network. Our Zero-trust system never misses a new attack, since it doesn't have to detect it in advance: it performs an ongoing mapping of the organization's software, then defines only the programs allowed to move on the network and use its resources. All the rest is blocked – including new malware. In addition, Cyber 2.0 continues protecting the organization from an infected computer, even when our system – which is based on an unbreachable chaos algorithm – is removed. For four consecutive years, Cyber 2.0 has invited hackers from all over the world to try to hack the system, for a prize of \$ 100,000. Over 5,500 hackers from 30 countries tried to crack the system – unsuccessfully.

CYBERTECH GLOBAL TEL AVIV 2023

Participating Startups

AccSenSe

Hailing out of Tel Aviv, the accSenSe team is comprised of former EMC veterans who have been exposed to the most challenging IT and security ecosystems in the world. Our mission is to protect and recover critical SaaS using a state-of-the-art access and business continuity platform. We provide Okta customers with both workforce and customer IAM needs with a single platform, for continuous protection and real-time access management. The accSenSe platform is designed to make your IAM system resilient, with features such as one-click recovery, constant verification of backed-up data, periodic testing for keeping the backup up-to-date and the ability to identify changes between different PITs (Point in Times).

amberMind

Created by engineer and entrepreneur Sylvain Huet in Paris in 2003, amberMind deals with crypto neural networks AI processing, IoT devices, and highly scalable SaaS apps. Huet also developed Minimacy, an open-source minimalist computer technology. Today's systems are complicated and therefore weak and unsecured. To tackle this, Minimacy takes a "less is more" approach, so that a single individual can understand 100% of the calculations made by the systems. This leads to strong "OS-less" devices, which leave attackers helpless. Huet, a pioneer in virtual worlds in the '90s and IoTs in the early 2000s, has participated in establishing a dozen tech startups.

Astrix Security

From Salesforce and Office 365 to GitHub and Snowflake, we ensure your XaaS core systems securely connect to third-party cloud services. Our agentless, easy-to-deploy solution provides holistic visibility into all app-to-app connections and automatically detects and remediates over-privileged, unnecessary, and malicious integrations exposing you to supply chain attacks, data leakage, and compliance violations.

Atmosec

Atmosec takes a holistic approach to securing your ever evolving SaaS ecosystem. Focusing not only on individual services or specific users, Atmosec also understands how different services communicate with each other, how users interact with the ecosystem, and what data might be passing between different services. Our unique platform monitors the behavior of an unlimited number of SaaS services, as they interact with users and each other and automates the mitigation of actual and potential risks, proactively flagging any abnormal activity of credentials, over-privileged accounts, API usage or misconfigurations to stop SaaS supply chain attacks and help CIOs and CISOs can address them with better visibility and confidence.

Bfore.ai

Bfore.ai is the first truly predictive security solution. Helping organizations prevent intrusions and data exfiltration by predicting vectors of future attacks, the information is used in #PreCrime, a predictive cyber threat intelligence to upgrade existing security solutions (firewalls, DNS resolvers, anti-phish filters, proxies, etc.) with foresight. Bfore.ai's patented AI technology combined with hyperscale observation infrastructure and modern APIs augment customers' security postures with Predictions. Our mission is to develop cybersecurity to a preventive posture, leaving detection and response where it can't be done otherwise.

Cognni

Cognni is a cognitive recognition AI solution, designed to autonomously detect and mitigate real information risks. Cognni's unique AI understands what the information is in a way that was only possible until now by humans, out of the box. Cognni also understands the context of the event to detect only the real risks to the information so it can mitigate that risk autonomously to solve the problem again, out of the box. By enabling InfoSec workers to mitigate company information risks & automate labeling, Cognni does the impossible work for InfoSec teams to complete on their own as they don't have the knowledge or human resources, resulting in a massive saving of time and money.

CYBERTECH GLOBAL TEL AVIV 2023

Participating Startups

Commugen

Commugen's Cyber-GRC automation platform helps security teams focus on protecting their company by simplifying and streamlining GRC work process, eliminating 80% of redundant manual tasks. This enables the bridging of the ever-growing skill gap and empowers resilience building through automation. Commugen's agile, no-code platform is specially made for cybersecurity GRC's everyday needs, enabling the easy creation of automated workflows for controls; the management & mitigation of risks; and the visualization of cyber GRC posture, in order to communicate clearly with every stakeholder. Leading enterprises put your cyber GRC on autopilot with Commugen

Cursor Insight

At Cursor Insight, we specialize in the scientific analysis of human motion. Our award-winning AI tool chain is capable of identifying and classifying users based on their unique movement patterns. We implement our movement analysis technology in convenient and efficient security software such as continuous authentication, 2FA, CAPTCHA, biometric e-signature, and walking recognition solutions. Our continuous authentication tool, Graboxy Sentinel, is designed to help fight account takeover fraud. It continuously authenticates users by analyzing their cursor movements during the whole user session. Our team is based in the UK and Hungary.

Cyberm8

Cyberm8 is a No-Code/Low-Code Security Automation Platform, which enables automating any security process – from Security Operations, to Incident Response as well as IT operations and Dev-SecOps. With its friendly UI and limitless connectivity abilities, anyone can start creating an automation processes in a manner of minutes, regardless of previous automation skills or knowledge.

CyberSafe Technologies Ltd

CyberSafe is a top provider of consulting services and customized solutions in the areas of information security, cyber security, IT infrastructure and OT, in various industries in Israel and abroad. The company was founded over 20 years ago by Yaron Cohen, an entrepreneur with extensive management experience in information security and Tomer Smolenski, an expert in the field of infrastructure and information security. Our unique services are the result of decades of experience in consulting customers through the construction of information security systems adapted to the organization's goals, combined with offensive information security knowledge.

Cyclops Security

Cyclops is a decision intelligence platform for cybersecurity. The product builds a graph of APIs from the enterprise security tools and creates data relations. Based on that graph, there is a layer of NLP to allow security practitioners, executives, and security teams to ask questions across the entire security stack to quickly and easily get contextual responses on any entity combining risk levels – that would otherwise involve multiple people searching multiple tools with multiple query languages, and manually connecting data and calculate the risk. The company is targeting use cases around security operations, threat hunting, compliance, and other related spaces. Cyclops is a cyber security mesh architecture platform.

Dynamics

Dynamics is the only next-generation Network Detection and Response (NDR) solution on the market today, using standard sampling protocols built-in to every gateway, patented algorithms, and AI & machine learning, to provide threat prediction and visibility at speed and scale. Built to protect networks of all sizes and complexity, its highly scalable approach discovers threats missed by competitors and provides clients and partners with an elite defense against cyberattacks, with little-to-no burden on their resources.

Cynomi

Meet Cynomi's vCISO: a virtual, AI-powered, automated CISO Platform. MSSPs and consulting firms have been leveraging this platform to provide vCISO services at scale – without scaling their existing resources. Cynomi's multitenant platform automatically generates everything a vCISO needs: risk and compliance assessments, tailored security policies, actionable remediation plans with prioritized tasks, task management tools, customer-facing reports.

Cywareness

Cywareness is an automated simulator that provides your employees with ongoing training that provides them with the knowledge and skillset to face today's cyber threats. Our platform allows you to maximize your employees' cybersecurity potential by exposing them to cybercrime scenarios on an ongoing basis, with no additional requirements or resources from your IT team. Using our autonomous simulator, which presents over 100 phishing attack templates supporting more than 10 languages, you will be able to gain insights and track the progress of your organization's cyber security awareness level.

DeepKeep LTD

DeepKeep develops a comprehensive enterprise software platform for protecting AI-based systems from domain-specific vulnerabilities, mistakes, confidence and digital attacks. While malicious attacks on AI models potentially lead to financial and reputational damage, the same can be caused by AI model mistakes. And when such a model experiences an error, a person must interfere with the process – making it slower and more expensive. Using state-of-the-art technology, DeepKeep can prevent those mistakes before deployment as well as during production stages. DeepKeep's unique, patent-pending technology, enables not only to detect of the abovementioned vulnerabilities, risks, and mistakes, but also provides a comprehensive set of tools along the entire AI life cycle for scalable, reliable, explainable AI deployments.

DevOcean Security

DevOcean solves the remediation challenge in cloud-native applications, helping security teams cut the time, man-hours, backlog, and tools needed to fix vulnerabilities across all layers in the cloud. We improve collaboration between security and development teams and offer remediation pipelines that connect directly to the existing development workflows – making remediation a one-click deal.

Enso Security

Enso is transforming application security by empowering organizations to build, manage and scale their AppSec programs. Its Application Security Posture Management (ASPM) platform easily deploys into an organization's environment to create an actionable, unified inventory of the app's assets, owners, security posture and associated risk. AppSec teams gain the capacity to manage the tools, people and processes involved in application security, enabling them to build a simplified, agile and scalable program without interfering with development. Enso has been recognized with various awards including the 2022 Excellence Awards, Globe Awards, and Forbes Top 20 Cybersecurity Startups to Watch.

Fortress

Fortress is a Next-Gen Open XDR&MDR (XMDR) platform for Enterprises' SecOps teams & Service providers, vendor-agnostic UI, management and multi-vendor tech stack, which dramatically reduces operation costs and cyber risks. Fortress simplifies SecOps with Virtual Analyst for extended detection, investigation, and response. It helps solve staff limitations while delivering seamless integration and UI of best-of-breed tools from multiple vendors. Our team is a group of mature cyber security experts and entrepreneurs incorporated in QMasters Security Services, a leading Israeli cybersecurity services company with prominent international customers.

FUGU

FUGU offers a new breed of payment fraud and chargeback liability solution tracking payments post-checkout, helping merchants safely accept transactions they currently lose to fraud, false declines, and payment churn. Our award-winning, multi-tier, self-learning fraud prevention solution fights payment fraud at various points along the transaction life cycle covering a wide variety of risk patterns and payment models that are currently not attended by no other solution in the market.

GYTPOL

GYTPOL is a next-gen security configuration management platform, which provides continuous detection and remediation of security gaps caused by misconfigurations (due to human errors, default settings etc). Once detected, GYTPOL also remediates. With a simple click, issues are resolved rapidly, as well as automatically for newly added devices. Additionally, we all know how much time is spent ensuring we don't "break something" before remediating. GYTPOL has solved this with zero impact remediation, which shows the impact before taking action. And if you need to roll-back, revert is also supported. The platform is presented in an easy to use, intuitive dashboard.

ITsMine™

ITsMine™ enables MSSPs to offer Managed Data Protection (MDP) as a Service, while proactively and automatically protecting companies against internal and external threats. The product provides alerts and displays critical forensic information, even after data exfiltration. ITsMine™ is easy to implement, transparent to employees and IT teams, meets regulatory requirements, and requires no endpoint agents. Our platform helps you protect your data without the overwhelming effort normally required and without painful installations, classifications and overly complex compliance.

Kamanja

Kamanja's multi-tenancy SaaS platform brings a new method for service providers, enabling them to adopt, implement, and maintain security and privacy frameworks for their clients. The platform leverages end-to-end cutting-edge technology. Together with collecting the required evidence, it also provides all of the tools necessary for the compliance process and resolves compliance gaps, correlates and analyzes the data, continuously monitors compliance status, and maintains your client's security lifecycle – including training and awareness, incident reporting, supply chain management, unified endpoint management, Internal and external audits, risk management, employee on and off boarding, security questionnaire and more.

Laminar

Laminar's Cloud Data Security Platform protects data for everything you build and run in the cloud across cloud providers (AWS, Azure, and GCP) and cloud data warehouses. The platform autonomously & continuously discovers & classifies new datastores for complete visibility, prioritizes risk based on sensitivity and data risk posture, secures data by remediating weak controls, and actively monitors for egress & access anomalies. Designed for the multi-cloud, Laminar's architecture takes an API-only approach, without agents and without sensitive data ever leaving your environment. Founded in 2020 by brilliant award-winning Israeli red team experts, Laminar is backed by Insight Partners, Tiger Global, Salesforce Ventures, TLV Partners, and SentinelOne.

LayerX Security

LayerX pioneers a User-First Browser Security Platform that's purpose-built for continuous monitoring, risk analysis, and proactive detection & prevention of web-borne threats. Delivered as a lightweight browser extension, the LayerX platform can be mounted on any browser that's used by the enterprise's workforce. Our vision is to make any browser the most secure and manageable workspace, with near-zero user impact, to enable a true cloud-first strategy.

MemcyCo

MemcyCo is a provider of a revolutionary new digital trust solution that empowers brands in combating online brand impersonation fraud, and preventing fraud damages to businesses and their clients. Our solution fosters digital trust in end-users on every website visit, and arms organizations with an agentless point-of-impact solution, which provides protection and unprecedented real time visibility into attacks. Your customers hear about cyber attacks every day – so make sure that they know your site and communications are legitimate.

Mesh Security

Mesh Security is the industry's first complete Zero Trust Posture Management (ZTPM) SaaS platform, a single source of truth that enables companies to implement and monitor a unified ZTA on top of their existing stack. Without using agents, Mesh seamlessly maps a company's entire cloud XaaS estate in minutes, providing comprehensive contextual visibility, control, and protection of the "Everywhere Enterprise".

Neosec

reinventing application security, Neosec is the intelligent way to protect your APIs from business abuse and data theft. Built for organizations that expose APIs to partners, suppliers, and users, Neosec discovers all your APIs, analyzes their behavior, audits risk, and stops threats lurking inside. Our pioneering SaaS platform unifies security and development teams to protect modern applications from threats at scale. Neosec has pioneered the use of behavioral analytics to understand normal vs. abnormal API usage and delivers powerful threat hunting capabilities. Neosec prevents threats and stops abuse hiding within APIs and brings new intelligence to application security.

Polar Security

Polar Security is the Data Security Posture Management (DSPM) platform pioneer. Our goal is to help cloud companies see, follow and protect everything they build and run in AWS, Azure, GCP, Snowflake, and Databricks. Our data security, governance and compliance platform operate in an autonomous fashion, allowing cloud security and compliance teams to continuously monitor, classify, follow and protect their sensitive data continuously and in real-time.

RevealSecurity

RevealSecurity detects malicious insiders and imposters by monitoring user journeys in enterprise applications. Powered by our unique clustering engine, RevealSecurity is ubiquitous, thereby able to detect threats which originate from both SaaS and custom-built applications. It protects enterprise organizations against cases in which an authenticated user is taking advantage of permissions to abuse/misuse an application, and also when an impersonator successfully bypasses authentication mechanisms and poses as a legitimate user. Our user journey analytics are based on an advanced, unsupervised, machine learning algorithm to detect abnormal journeys which reflect abuse, misuse and malicious activities.

Salvador Technologies

Salvador Technologies provides breakthrough technological solutions for operational continuity and cyber-attack recovery for ICS & OT, ensuring an easy validation of the backup integrity with an instant restoration test. The patented air-gap technology enables a full 30-second recovery from any scenario.

Satori

Data security has always been a complex domain, and there is no silver bullet that will solve every use-case. For B2B companies, customer data is not only a source of great power but also risk. Regulation, compliance and customer requirements have been forcing security leaders to either be the bad cops or headline tomorrow's news. Satori invented the first data security platform designed to protect customer data, while making both admins and end users more productive. Founded on the basis of a decade-long experience in cyber security, Satori is on a mission to help companies protect their data without sacrificing productivity or overloading engineering teams.

Scrut Automation

Scrut Automation is a SaaS-based Smart GRC tool, which helps customers simplify and accelerate their compliance journeys. With more than 180 customers globally, we offer 10x faster time to compliance, towards 20+ infosec standards such as SOC 2, ISO 27001, GDPR, PCI DSS, HIPAA, and others. This, by offering continuous control monitoring across infosec controls, to ensure that our customers don't just get compliant – but stay compliant. We offer a low-touch implementation model that brings down customer involvement by 70%, which allows you to keep your focus on your business.

Scytale

Scytale is a global leader in security compliance automation, helping SaaS companies get and stay compliant with security frameworks like SOC 1, SOC 2, ISO 27001, HIPAA, GDPR and PCI-DSS, without breaking a sweat. Our experts offer personalized guidance to streamline compliance, enabling faster growth and boosting customer trust. We know the information security realm inside and out, and have years of audit experience. We knew that with our expertise and passion, we could totally transform the way SaaS companies deal with compliance, and through carefully designed, next-gen, we've managed to completely change the game.

SecuPi

SecuPi empowers organizations to use data in a secure, compliant and responsible way. SecuPi's award-winning solution and methodology deliver next generation, data security, privacy compliance and consent optimization from legacy on-prem to hybrid cloud environments. SecuPi's centrally managed, consistently applied, transparent, data-centric security with Purpose Based Access Control (PBAC), monitoring, User Behavior Analytics (UBA), and privacy enforcement is used by the largest global financial services, insurance, telcos, retailers and more.

Seraphic Security

Seraphic enables secure browsing for your employees and contractors, working from their corporate or personal devices, to protect enterprise assets while providing advanced governance and policy enforcement. Our solution offers a lightweight browser agent that is distributed easily and seamlessly, protecting your users' browsers against exploits, social engineering attacks, and web application vulnerabilities. This, while providing your security team with unique runtime telemetry and enabling advanced governance and policy enforcement capabilities.

Strong Network

Strong Network is an award-winning Swiss cybersecurity startup that leverages software containers to solve the IT efficiency and security problems of running a distributed code-development team. Our hybrid cloud platform helps global organizations manage external developers, prevent source code and data leaks, automate DevOps, as well as provide real-time monitoring metrics. Founded in 2020 and backed by top European VCs OpenOcean and Wingman Ventures, we are a fast-growing company with a vision to become the leading secure development workspace platform.

Surf Security

SURF is a chromium-based zero-trust enterprise browser, which creates a secured environment on any endpoint. The product allows its users to work wherever, whenever, and however they want, while supporting their productivity and privacy. SURF protects your downloaded data and end-points from being stolen, infected or corrupted, without blocking anything from any device – managed or unmanaged.

SyMania

SyMania (Symbol-Mania), by URU Sec Ltd, presents an easy to use, super secure, passwordless MFA patented system, with a unique random handshaking algorithm, using game-changer multi-factors that force the real user's physical intervention without using biometrics –and all in a single login layer. SyMania's solution prevents about 70% of all cyberattacks against account and user theft, as well as phishing of the user's identification details and automated cyberattacks. The solution is cloud-based (an On-Prem solution can be integrated), suitable for several international markets, simple to implement and operate, and saves a lot of money (and headaches).

TripleP Cyber Security Experts

TripleP is a leading Israeli cyber & information security services and consulting company, established in 2018. We work with BFSI enterprises, governments, universities, and law enforcement, defense, and critical infrastructure entities to establish their cyber readiness program, by investing in capacity building and workforce optimization. Our offer includes the design and development of a cybersecurity excellence center, a cyber readiness academy with over 20 courses and practical labs, incident response and digital forensics cyber drills & consulting services. TripleP has also developed Cycube, an AI-driven, hands-on cybersecurity readiness platform that helps organizations sharpen team skills and improve cyber readiness.

Upstream Security

Upstream provides a data management and cybersecurity platform, purpose-built for connected vehicles and smart mobility. The Upstream Platform transforms highly distributed vehicle data into centralized, structured, and contextualized data lakes. Utilizing advanced machine-learning technologies, the platform unlocks the value of mobility data, delivering unparalleled automotive cybersecurity and data-driven applications.

Wizdome Security Ltd

Wizdome understands the overall security posture just like an attacker would, and reaches even the darkest cyberspace corners to uncover hackers' intentions, revealing the organization threat level and correlating it into the organization security posture. Wizdome puts an end to alert fatigue by bridging the gap between attack surface mapping and threat intelligence, and employs the best in AI and cyber-expertise to produce easy-to-read, easy-to-understand intelligence. Empower your security teams with the wisdom they need to tackle even the most complex of security issues. Wizdome helps security teams to stay on track with the organization posture and allows the team to effectively reduce risks from any category, anytime.

Ovalsec

Ovalsec is a cloud-based, fully automated external attack surface management and protection solution that provides continuous security with extensive visibility and vulnerability detection. Founded by ethical hackers and security experts, we approach security from the outside in – always searching for new attack pathways that go wider and deeper. We focus our research on critical misconfigurations and high-impact vulnerabilities, helping you to reduce noise, prevent alert fatigue and decrease your risk and exposure time.

Cynergy

The constant growth in organizations' digital footprints, combined with a chronic shortage of cyber experts, has been placing many of them at risk of being attacked and exploited by hackers. Established in late 2019, Cynergy aims to help organizations protect themselves from that. Cynergy designed and developed the 2nd generation External Attack Surface Management (EASM) platform, which detects and validates organizations' vulnerabilities on all Internet-facing assets. backed by a powerful ML engine, Cynergy is now closing the loop with the introduction of new and innovative automated remediation playbooks. Take control of your cyber security resilience today.

Rezonate

Rezonate is the Cloud Identity Protection Platform (CIPP) CISOs rely on to eliminate an adversary's opportunity to breach cloud identity and access. Built for security and loved by DevOps teams, Rezonate transforms the way we protect identities – human or machine – across clouds and identity providers. Our agentless platform combines continuous identity posture, identity detection and response (IDR) and operational visibility, from build time to real time, to provide security that is as dynamic and automated as the infrastructure it is protecting.

RiskRecon

RiskRecon, a Mastercard company, is the only continuous vendor monitoring solution that delivers risk-prioritized action plans custom-tuned to match your risk priorities, providing the world's easiest path to understanding and acting on third-party cyber risk. Partner with RiskRecon to build your scalable, third-party risk management program and realize dramatically better risk outcomes. To learn more about RiskRecon's approach or to request a demo, visit our website.

Scribe Security

SCRIBE is an end-to-end software supply chain security platform that secures code throughout your entire software supply chain and throughout your product's life cycle, from development to delivery to update. SCRIBE equips you to attest to the integrity, provenance, reputation, and authenticity of the code that you use and develop and the tools and processes that made it. SCRIBE's SaaS platform promotes rapid deployment and secure operation – a practical "Shift Left" software security toolset built for DevOps and developers.

Canonic Security

Canonic Security provides a SaaS application security platform that continuously profiles apps and user accounts, identifies suspicious or out-of-policy behavior, and automatically reduces the SaaS attack surface. The platform provides access intelligence and vulnerability insight, detects SaaS-native threats, and helps security teams respond quickly. For more information, please visit our website.

Ironvest

Splitt

AI is a powerful technology that is now at the core of organizations' business practices. But It's also their Achilles heel. Easily manipulated and extremely vulnerable. Splitt mitigates these scenarios with unique technology, securing your models not only from fraud & attacks, but also from theft. A comprehensive solution for your AI protection needs. Leave your contact information and we will get back to you shortly. That's a promise.
