

# Drone Protection on the Move

sentrycs

In today's rapidly evolving drone threat landscape, protecting VIP convoys, special forces operations and first responder missions against UAS has become a necessity.

Sentrycs' Vehicle-mounted Integrated Counter-drone Solution, guarantees the ease of use, discretion, and efficiency required to seamlessly mitigate drone threats in any environment.

## Integrated Counter-drone Solution on the Move

Sentrycs' Vehicle-mounted Integrated Counter-drone Solution is designed to discreetly protect a moving target. It can detect, track, and identify drones and their operators accurately and reliably, with zero false alarms. Then it can take over control of unauthorized drones when they enter this radius and safely send them back home. This is all done without any collateral damage or interference with authorized drones or other communications or navigation systems.

### Detect

Plug and play 24/7 autonomous monitoring and alerting

### Track

Accurate locations, height, & speed for both drone & operator

### Identify

User-level identification – drone vendor, type and serial number

### Mitigate

Automatically takes over & safely sends the drone back home

## The Only Viable Counter-drone System for Mobile and Under-cover Teams

Sentrycs presents the following advantages:

### 1. Low footprint concealed sky protection

Go unnoticed, without compromising performance and accuracy. Sentrycs' vehicle-mounted solution ensures wide-area protection for your peace of mind.

### 2. Adaptable

The Sentrycs vehicle-mounted solution can be installed in any configuration on any vehicle.

### 3. Automomous

The solution is intuitive to use and can operate autonomously, freeing up your team to focus on their mission.

### 4. Rapid response

Stay one step ahead of threats. Our system rapidly reacts to emerging threats, primed for real-time detection and neutralization

### 5. Superior Accuracy

Creates no false positives and can differentiate between friends and foe drones.

### 6. Safe in any environment

Creates no interference with communication signals & GNSS and no collateral damage.

## Advanced Centralized Command & Control

- 01 Entirely autonomous
- 02 Integrates with other systems in use
- 03 Mission configuration & management:
  - Radius to protect
  - Mitigation Rules
  - Smart disconnect
  - Allowed drones list
  - Drone operator's location
- 04 Event replay and analytics for mission debrief

At Sentrycs, we understand that solving complex challenges takes more than just technology. That is why we work closely with the entire drone ecosystem to bring a scalable, safe, and secure resolution to uncontrolled drone traffic. Want to learn more? Contact us today!
