THREAT OPERATIONS CENTER

I+

service is a unique value proposition that enhance the organizations understanding of the threats the organization is facing outside their own network.

The service was developed based on a real-world incident response and cyber security consulting experience utilizing next generation proactive defense technologies.

In order to provide in-depth monitoring and actionable intelligence, I+ experts design multi-layer protection which combine intelligence about APTs, botnet, and crimeware (such as ransomware) campaigns into a single service that provides and alerts to your organization.

I+

I+ triage approach aggregates, monitors, and delivers critical security alerts from multiple feeds, sources and technologies to maximize the telemetry of critical alerts to I+ customers.

ATTACKWATCH

I+ Threat Operations Center is powered by the following capabilities:

Threat Intelligence Research:

Alert on existing and emerging cyber threats by monitoring threat actors, targets, campaigns and other tactics, techniques and procedures (TTPs).

Breach Intelligence:

Actionable critical alerts that help pinpoint potential infections which affects your organization directly.

Malware analysis reports and IOCs:

Analysis and Indicators of Compromise (IOCs) reports about malware behavior that I+ clients can use in order to detect or respond to emerging threats within their infrastructure.

Malicious Tools & Services:

Alerts and Analyst to identify, with high confidence, malicious assets and critical vulnerabilities.

Asset detection and attack surface management (ASM):

Identify internet facing assets and high-risk vulnerabilities, open ports, configuration risk, technology stack and logins.
